Figure legend:

CA1 and ripples recording confirmation. a) Histological mapping of CA1 recording for the in-phase group (IN) used for fear conditioning (FC) Prv-mhChR2-eYFP mice ($n = 9$). b) Representative positioning for lesion or tracks found in the CA1 region. c) corresponding triggered average detected ripples (raw data) in CA1 for each mice of the IN group shown in (a). d) distribution of delta/theta power ratio during NREM/REM for all CA1 recordings. e) other ?

Schema - Hippocampus & Gyrus dentatus

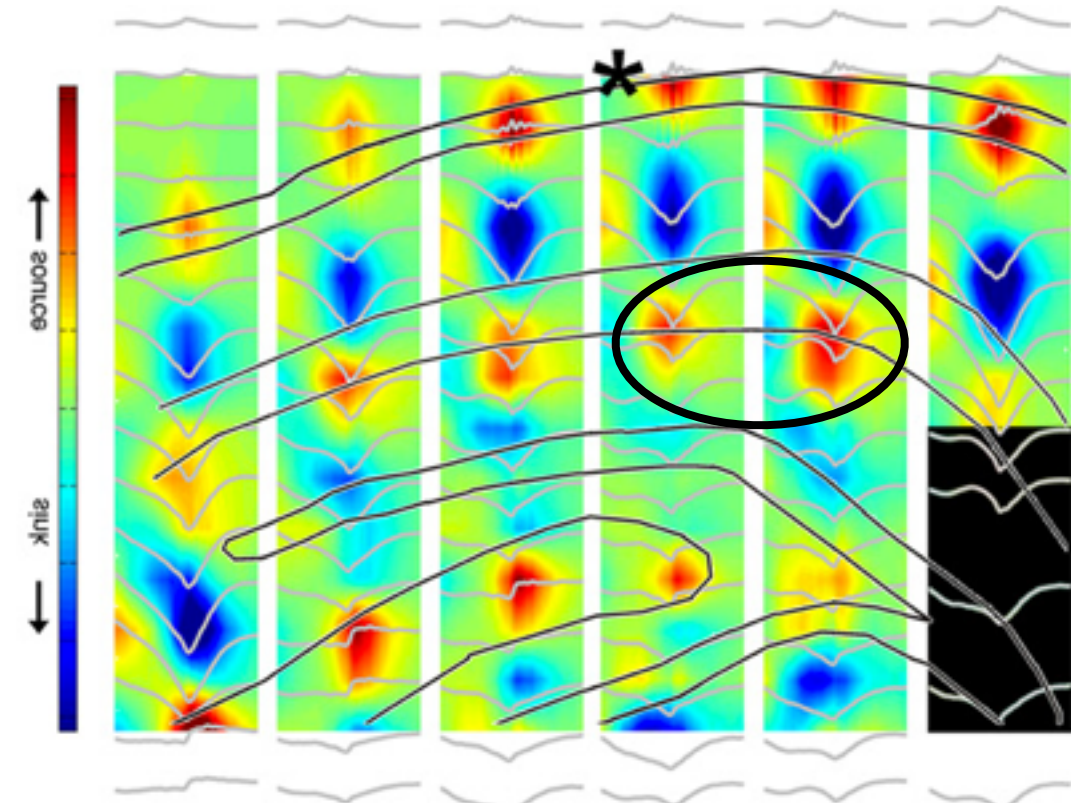

Ripple in Pyr vs Rad different characteristics

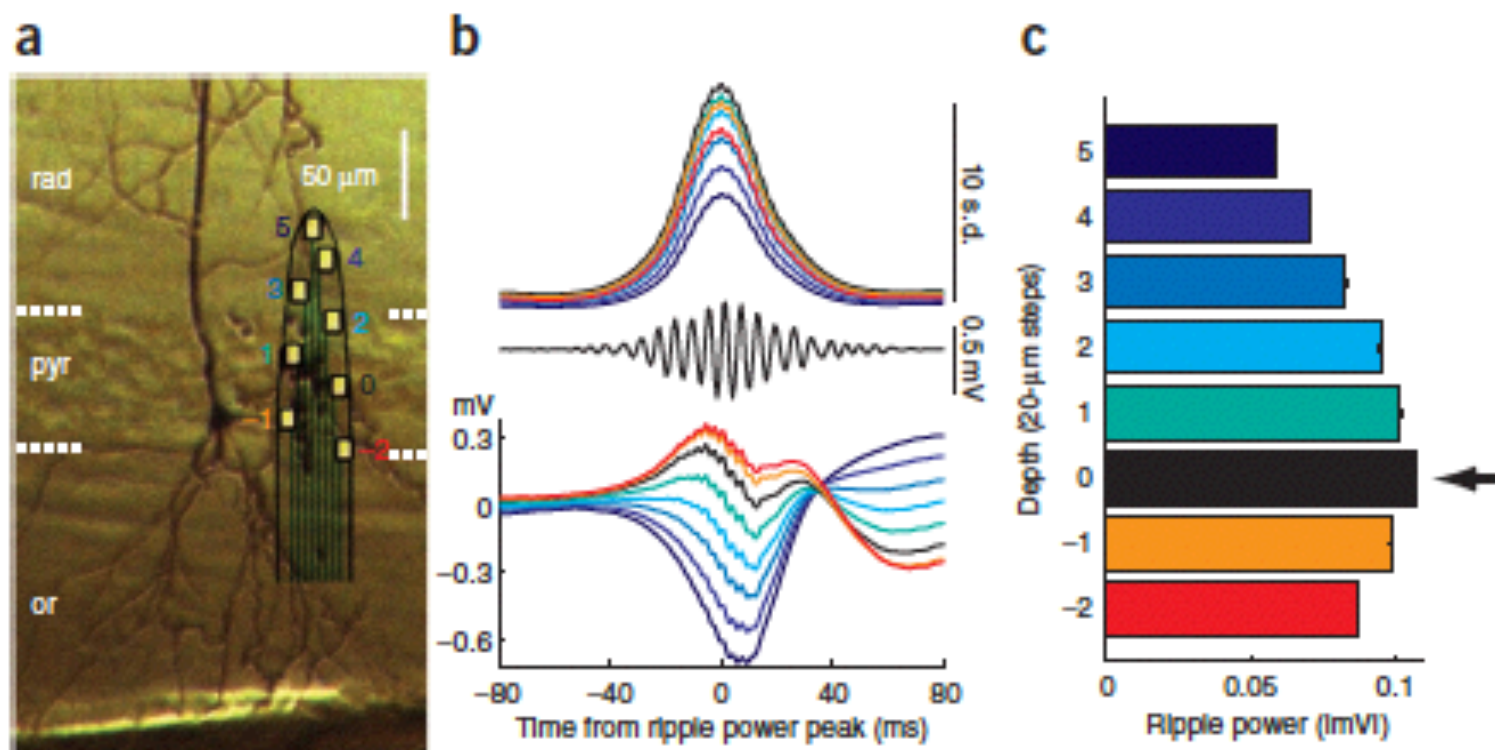

Schonberger et al, Front Neural Circ, 2014

Ripple current source density

Sullivan et al, J Neuro, 2011

Mizuseki et al, nat neuro, 2011

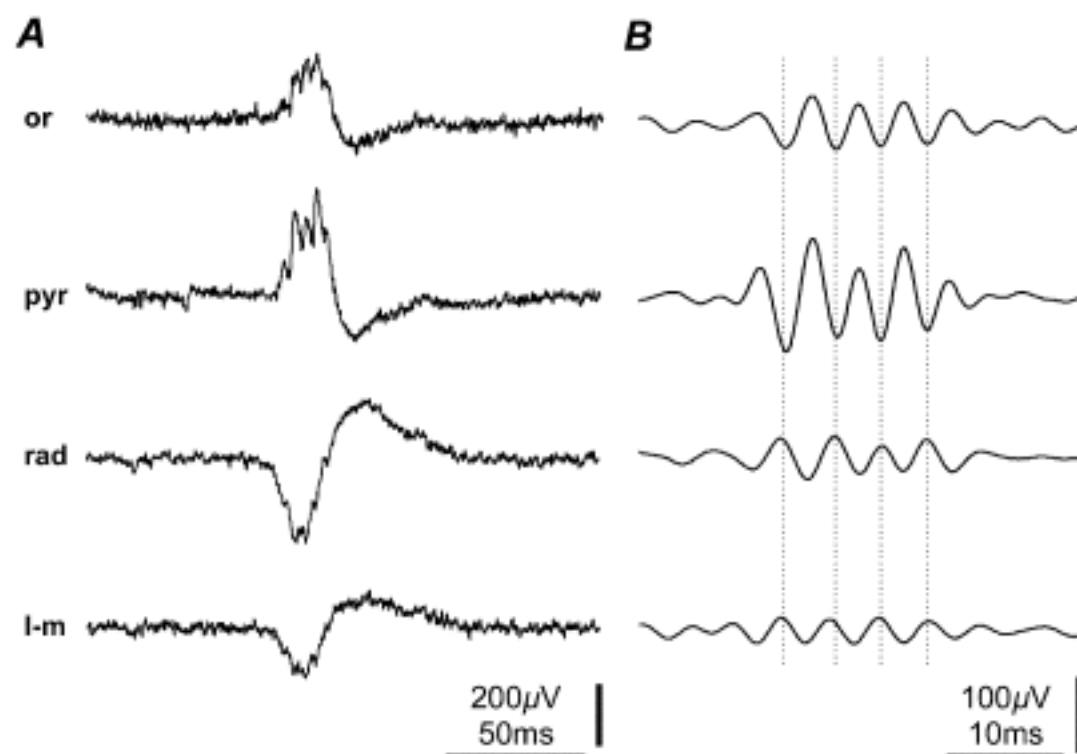

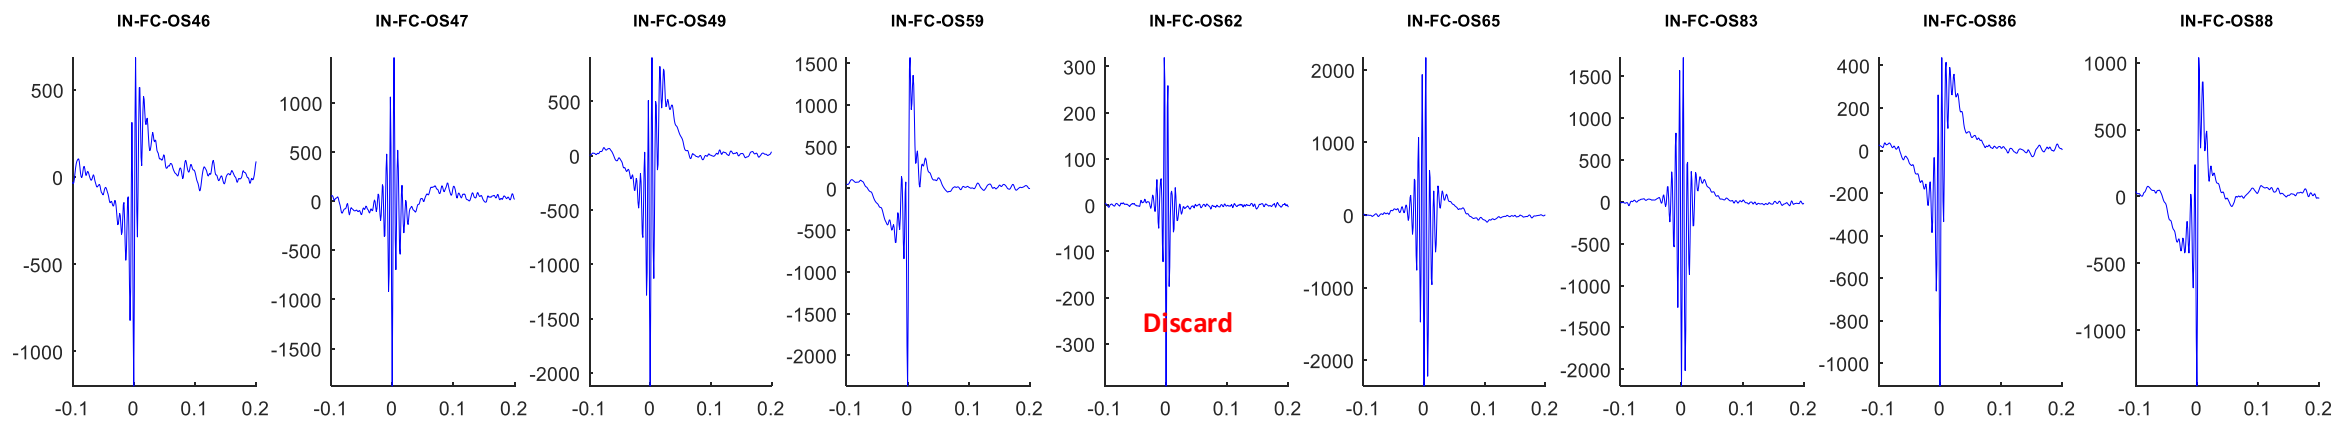

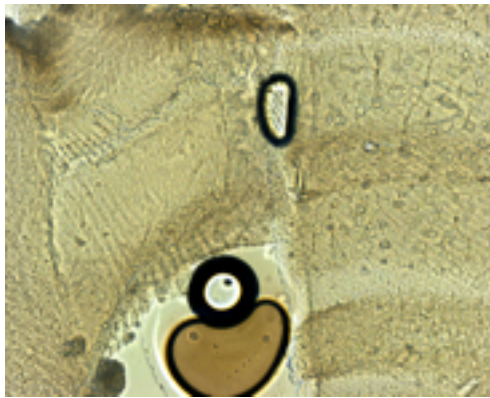

Figure 7. Laminar profile of SPW-R

A, quadruple recording from different layers in CA1. Note the phase reversal between stratum pyramidale and stratum radiatum. *B*, band-pass filtered signals of the SPW-R shown in *A*. Ripples are most prominent in stratum pyramidale but are visible in all layers. Phase reversal is similar to sharp waves. Abbreviations: or, stratum oriens; pyr, stratum pyramidale; rad, stratum radiatum; l-m, stratum lacunosum-moleculare.
